

Report ID	D1BF023867	Generated	12 Sep 2026, 06:29 UTC
Patient	Sample test patient	Age / sex	Not provided / Not provided

Triage: Low Risk

No red-flag symptoms were reported. Consult a doctor if symptoms persist or worsen.

Emergency score 0. Red-flag symptoms: none reported.

Reported symptoms

cough, nasal congestion, vomiting, decreased appetite, fever, ache all over, skin rash

Possible conditions

Confidence: **Very High**. The most likely condition has a probability of 100.0%, 100.0 points ahead of the next.

#	Condition	Ensemble	DNN	Naive Bayes	Rule score
1	Strep throat	100.0%	99.9%	100.0%	0.67
2	Viral exanthem	0.0%	0.0%	0.0%	0.62
3	Herpangina	0.0%	0.1%	0.0%	0.55
4	Diaper rash	0.0%	0.0%	0.0%	0.50
5	Acute bronchiolitis	0.0%	0.0%	0.0%	0.48

Ensemble = 0.00 x deep neural network + 1.00 x Bernoulli Naive Bayes. Rule score is an independent symptom-profile match from 0 to 1.

Why strep throat ranked first

Each reported symptom was removed in turn. Influence is the symptom's share of the evidence for this condition (negative values argue against it). Probability change is how much the probability falls when the symptom is removed.

Symptom	Influence	Probability change
Ache all over	+100.0%	+47.2 pts
Nasal congestion	0.0%	0.0 pts
Decreased appetite	0.0%	0.0 pts
Skin rash	0.0%	0.0 pts
Cough	0.0%	0.0 pts
Vomiting	0.0%	0.0 pts
Fever	0.0%	0.0 pts

Often seen with strep throat but not reported: ear pain (52% of cases), headache (52% of cases), chills (50% of cases), sore throat (50% of cases), difficulty in swallowing (47% of cases).

Rule-based cross-check

Condition	Score	Key symptoms matched
Strep throat	0.67	7 of 12: cough, nasal congestion, vomiting, decreased appetite, fever, ache all over, skin rash
Viral exanthem	0.62	6 of 10: cough, nasal congestion, vomiting, decreased appetite, fever, skin rash
Herpangina	0.55	5 of 9: cough, vomiting, decreased appetite, fever, skin rash
Diaper rash	0.50	5 of 11: cough, nasal congestion, vomiting, fever, skin rash
Acute bronchiolitis	0.48	5 of 12: cough, nasal congestion, vomiting, decreased appetite, fever

Recommendations

- No red-flag symptoms were reported. Consult a doctor if symptoms persist or worsen.
- The models point clearly to strep throat, but this is a screening result, not a diagnosis. Confirm it with a qualified clinician.
- Do not start, stop or change any medicine based on this result.

HealthBandhu is an educational and research prototype. It does not provide a medical diagnosis and must not replace assessment by a qualified healthcare professional. Do not start, stop or change any treatment based on this result.

Models used: Bernoulli Naive Bayes.
